Daily Market Briefing — Friday, November 6, 2026 (PT)

Thursday was the worst day for stocks since April 2025. The S&P 500 fell 4.4% and the Nasdaq 100 6.4% as investors sold anything tied to AI after Texas elected a governor who promised to halt new data centers. Chip stocks had their worst day since 2020. This morning October payrolls came in at 165,000 against 65,000 expected, yields rose, and chips are bouncing: the S&P is +0.9% and Nvidia +4%. D-Wave and Rigetti report Tuesday, the same morning as CPI.

Six of eight red, one amber, one green. A vulnerability gauge, not a forecast — the tape is fragile IF CPI runs hot, the Huang briefing turns into export rules, or the moratoria spread beyond Texas. Record: 4 mild hits, 11 false alarms; the 11/2 row (7,541) resolves at Monday's close, −2.5% so far; no read exists for the 11/4 settle because Thursday's build did not run; a row posts today for the 11/5 settle (threshold 5 red).
